AnVa Polytech

Your partner in development and manufacturing of moulded elastomer products and supply of compounds.

AnVa Polytech newsletter 1/2016

AnVa continues to **build for the future** and strengthen our competitiveness on the market. From Q3 this year, AnVa will add manufacturing capacity also of **thermoplastic elastomers** (TPE, TPV) which very well will fit in our existing product range of rubber- and silicone products. Our target is to be our valued customer's best choice in development services and supply of elastomer products.

--

In Q4/2015, AnVa launched our new **environmental EPDM** which significantly reduces the CO2 impact in our environment. This material is based on recycled instead of oil based carbon black. Our first customer to approve our new environmental EPDM was **Volvo Cars**.

As far as we know, this is the **first time** a manufacturer can offer mass production of rubber products in which the carbon black content is "green". This is a result of an extensive development work and close collaboration with Scandinavian Enviro System. Together we are now moving the Swedish rubber industry and recycling of rubber to the forefront of creating truly green products and a circular economy.

An important part of this project is also that AnVa's own waste will be **recycled** instead of being sent off for disposal.

For further information about our environmental EPDM, please visit www.polytech.anva.se/news

--

AnVa's **in-house tool shop** has gone through major changes. New investments of machinery and software are installed and allow us now to offer in-house made injection tools as well as product unique process equipment. Our **improved** tool shop reduces lead times, adds flexibility in customer projects and strengthens our competitiveness towards our customers.

--

Our **production plant in Biržai Lithuania** started a bit more than one year ago and thanks to excellent contributions from our staff at headquarters in Sunne and at the plant in Biržai the progress shown is beyond expectations. Quality audits have been performed by a number of our major customers with approved results and since a couple of weeks we have an **approved ISO/TS-16949** audit performed by Bureau Veritas Sweden.

More news and updates from AnVa Polytech and AnVa group companies are continuously posted on our website **www.anva.se**
